

Personal Summary

I have completed a Bachelor of Engineering in Electronics and Communication Engineering. Currently, I am working in the healthcare industry as a Developer specializing in Business Intelligence and data analytics tools. I am proficient in SQL and Python, with a strong foundation in Artificial Intelligence, along with strong analytical thinking and problem-solving skills. I also use Generative AI tools such as GitHub Copilot to enhance productivity and improve development efficiency. During my internship, I worked with AI modeling tools to validate facial recognition of resources against their LinkedIn profiles. Additionally, I co-authored a research paper on Machine Learning-based authentication using ECG and PPG signals. I aspire to apply my Artificial Intelligence expertise in Business Intelligence and Data Analytics, combining data modeling with AI techniques to create impactful, data-driven solutions.

Skills :

- Azure Databricks
- ETL
- SQL
- Python (Pandas, PySpark, NumPy, Flask, OpenCV, and Dlib)
- Microstrategy
- Power BI
- GIT

Certifications :

Duration	Course	Institution
Mar 2026	Fundamentals of Azure Databricks	Coursera
Sep 25 - Dec 25	Data Science and Machine Learning	Gilbert Research Center
July 2025	Data Analysis and Visualization in Power BI	Coursera
Dec 2024	Generative AI for everyone	Coursera
Nov 2024	Microstrategy for Business Intelligence	Udemy
Aug 23 – Dec 23	Machine Learning using Python	Infosys Springboard

Education :

Madras Institute of Technology, Anna University Chennai, India

Bachelor of Technology in Electronics and Communication

Nov 2020 - May 2024

- Secured an aggregate of 7.7 CGPA

Higher Secondary Education, Vels Vidyashram Chennai, India

June 2018 – April 2020

Percentage-86.7%

Secondary Education, Vels Vidyashram Chennai, India

July 2005 – April 2018

Percentage-72.8%

Work Experience :

Business Intelligence Developer, Neurealm (Previously named as GAVS Technologies) Jul 2024 – To Date

Role BI/ETL Developer

- Working in the healthcare domain, supporting analytics and reporting for US-based hospital clients, ensuring secure and reliable data processing for operational and clinical reporting.
- Developed and maintained interactive KPI dashboards and analytical reports using MicroStrategy,

- enabling senior leadership to monitor operational and clinical performance metrics in real time.
- Conducted exploratory data analysis (EDA) and statistical investigations on large, complex healthcare datasets to identify trends, anomalies, and actionable insights for US-based hospital clients.
- Performed SQL performance optimization and query troubleshooting, reducing execution time and improving overall reporting system reliability.
- Leveraged Azure Databricks (PySpark, Delta Lake) for large-scale data processing, transformation, and preparation of curated datasets used in analytics and reporting.
- Built ETL/ELT data pipelines using Azure Data Factory (ADF) to ingest and transform data from hospital management systems into Azure Databricks and modern data lake environments.
- Worked with Microsoft Fabric Lakehouse architecture to support scalable data storage and analytics-ready datasets for reporting and downstream integrations.
- Implemented SQL-based data modeling techniques to design and maintain efficient data models and reporting layers supporting dashboards and business analytics.
- Migrated and transformed data from hospital management databases into Azure Databricks, applying data anonymization techniques to ensure patient privacy and compliance with healthcare data protection standards.
- Created recurring and ad-hoc reports for senior leadership, translating complex datasets into clear, actionable insights to support operational and strategic decision-making.
- Led a large-scale data migration of over 2 TB from Teradata to Azure Databricks, significantly improving application performance and reporting efficiency.
- Developed and executed DML and DDL SQL commands to manage database structures, manipulate datasets, and support reporting requirements.
- Developed KPI dashboards in MicroStrategy by integrating curated Databricks datasets and ETL pipelines, while leveraging DevOps and CI/CD practices for efficient data solution delivery.
- Applied data governance, security, and anonymization best practices while managing sensitive healthcare data.
- Performed SQL query troubleshooting and performance optimization, improving reporting efficiency and reducing query execution time.
- Conducted quality assurance, regression testing, and validation to ensure reporting accuracy and system reliability.
- Analyzed operational and customer service metrics to identify process gaps, detect trends, and recommend data-driven improvements.
- Performed ad-hoc analysis and exploratory data investigations to support Customer Service operations and leadership decision-making.

Additional information :

- Co-authored and published a paper in PriMera Scientific Publications on Machine Learning-based authentication using ECG and PPG signals.
- Completed an internship as an AI Developer at Truetech Solutions (July–August 2022), where I developed a face recognition-based interview chatbot using Flask, OpenCV, and Dlib to enable real-time candidate identity verification and AI-driven authentication.
- Languages Known: English, Tamil, and German.
