

Personal Summary

I have completed a Bachelor of Engineering in Electronics and Communication Engineering. Currently, I am working in the healthcare industry as a Developer specializing in Business Intelligence and data analytics tools. I am proficient in SQL and Python, with a strong foundation in Artificial Intelligence, along with strong analytical thinking and problem-solving skills. I also use Generative AI tools such as GitHub Copilot to enhance productivity and improve development efficiency. During my internship, I worked with AI modeling tools dataset preparation for AI training to validate facial recognition of resources against their LinkedIn profiles. Additionally, I co-authored a research paper on Machine Learning-based authentication using ECG and PPG signals. I aspire to apply my Artificial Intelligence expertise in Business Intelligence and Data Analytics, combining data modeling with AI techniques to create impactful, data-driven solutions.

Skills :

- Azure Databricks
- ETL
- PostgreSQL, MySQL
- Python (Pandas, PySpark, NumPy, OpenCV, and Dlib)
- Microstrategy
- Power BI
- GIT/GITHUB
- GITHUB Copilot, Claude, OpenAI API

Certifications :

Duration	Course	Institution
July 26 - August 26	Databricks Certified Data Engineer Professional	Databricks
Sep 25 - Dec 25	Data Science and Machine Learning	Gilbert Research Center
July 2025	Data Analysis and Visualization in Power BI	Coursera
Dec 2024	Generative AI for everyone	Coursera
Nov 2024	Microstrategy for Business Intelligence	Udemy
Aug 23 – Dec 23	Machine Learning using Python	Infosys Springboard

Education :

Madras Institute of Technology, Anna University Chennai, India

Bachelor of Technology in Electronics and Communication

Nov 2020 - M a y 2024

- Secured an aggregate of 7.7 CGPA

Higher Secondary Education, Vels Vidyashram Chennai, India

June 2018 – April 2020

Percentage-86.7%

Secondary Education, Vels Vidyashram Chennai, India

July 2005 – April 2018

Percentage-72.8%

Work Experience :

Data Engineer, Neurealm (Previously named as GAVS Technologies) Jul 2024 – To Date

Role BI/ETL Developer

Data Engineer, Neurealm (Previously GAVS Technologies) | Jul 2024 – Present

BI/ETL Developer

I work in the healthcare domain, building and maintaining data pipelines and reporting systems that hospital clients in the US rely on for both daily operations and clinical decision making. Over the past year, my focus has shifted from just building dashboards to owning the full data lifecycle, from ingestion to modeling to delivery.

- Own the delivery of KPI dashboards in MicroStrategy, working directly with hospital leadership to translate operational and clinical questions into clear, well defined metrics and reporting requirements.
- Build and maintain dashboards by connecting multiple raw data sources, including MySQL hospital management systems, into curated datasets in Azure Databricks, ensuring the numbers on screen are accurate and traceable back to source.
- Maintain documentation of critical metrics, data sources, and data mapping, so that definitions stay consistent and anyone picking up the work later understands exactly how a number is calculated.
- Supervise data quality through ongoing validation, catching inconsistencies or anomalies in large healthcare datasets before they reach a client facing report.
- Apply data governance and anonymization practices as standard, since access, roles, and consistency matter as much as accuracy when handling sensitive patient data.
- Coordinate with IT and engineering teams on schema changes and deployments using Liquibase, tracking releases across dev, QA, demo, and production so nothing breaks silently.
- Led a large-scale migration of over 2TB of data from Teradata into Azure Databricks, which required close collaboration with technical teams and a clear plan to keep reporting accurate throughout the transition.
- Manage schema changes and database deployments using Liquibase, coordinating releases across Dev, QA, Demo, and Production environments.
- Use SQL performance tuning and optimization regularly to keep reporting systems fast and reliable, especially as data volume grows.
- Implementing HIPAA-compliant reporting through Row-Level Security (RLS), object security, and PHI access controls.
- Performed SQL query troubleshooting and performance optimization, improving reporting efficiency and reducing query execution time.
- Worked with Databricks Asset Bundles (DABs) and Databricks CLI within CI/CD workflows, implementing schema-view changes and managing DDL/DML scripts based on business and technical requirements across deployment environments.
- Perform data profiling, quality validation, regression testing, and anomaly investigation to ensure accuracy and consistency across reporting systems.
- Collaborated within Agile Scrum teams using Azure Boards for sprint management, retrospective and GitHub for version control, and CI/CD-based deployments across multiple environments.
- Developing Reports, Dossiers, Intelligent Cubes, advanced metrics, prompts, filters, derived elements, consolidations, and custom groups.
- Collaborate with IT, engineering, and business stakeholders to gather requirements, resolve data issues, and deliver reliable data and reporting solutions.

Additional information :

- Co-authored and published a paper in PriMera Scientific Publications on Machine Learning-based authentication using ECG and PPG signals.
- Completed an internship as an AI Developer at Truetech Solutions (July–August 2022), where I developed a face recognition-based interview chatbot using Flask, OpenCV, and Dlib to enable real-time candidate identity verification and AI-driven authentication.
- Languages Known: English, Tamil, and German.
